Driving AI from Concept to Reality !

AI : A Business Imperative

In today's rapidly evolving business landscape, the integration of AI and data-driven innovation has become imperative for enterprises aiming to stay competitive and relevant.

Executive Consensus on Generative AI

97% of Fortune 500 executives see Generative AI as transformative for their company and industry.

Increased Tech Investment

67% of organizations plan to boost technology spending, prioritizing investments in data and AI.

Challenges to the adoption of AI

Enterprises encounter hurdles in AI adoption. Here are the key challenges:

Unclear AI Roadmap

Difficulty in identifying impactful AI use cases, hindering ROI.

Rapid Pace of AI Advancements

Keeping up with evolving technology, leads to investment hesitation and fear of obsolescence.

Data Readiness

Insufficient or poor-quality data impedes AI initiatives, hindering effective implementation and insights generation.

Lack of AI Skillset

Inadequate internal expertise limits the development of accurate, safe, and explainable AI solutions.

Integration Complexity

Challenges in integrating AI into existing systems, addressing regulatory requirements, and establishing feedback loops for continuous improvement.

Introducing Indika AI

At Indika AI our mission is to empower businesses and institutions by providing cutting-edge AI solutions that enhance data management, optimize operations, and foster innovation. We are committed to transforming traditional practices and unlocking new growth opportunities through our diverse suite of products and services

AI Development Lifecycle with Indika AI

At Indika AI, we guide you through every step of the AI development lifecycle, adding value at each stage to ensure the successful implementation and deployment of AI solutions.

Enterprise AI Strategy

Collaborate with our experts to define your AI strategy and roadmap, identifying use cases aligned with your business objectives.

Data Readiness

Ensure data readiness through digitization, anonymization, curation, and labeling services, enabling the use of high-quality data for AI development.

Foundation Model Selection

Select the most suitable base model for your AI solution, leveraging our expertise in model selection and customization.

Model Fine Tuning & Validation

Fine-tune and validate AI models to ensure accuracy, reliability, and performance, utilizing our advanced techniques and tools.

Model Deployment

Deploy AI models seamlessly into your existing infrastructure, with support from our team to ensure smooth integration and functionality.

Continuous Monitoring

Monitor AI models continuously post-deployment, providing ongoing support and maintenance to optimize performance and address any issues.

Tailored AI Solutions

Generative AI	Customize base models for text, image and video generation, RAG, and summarization.	     
Computer Vision	Develop models for object detection, image segmentation, image classification, image and video generation	    
Natural Language Processing (NLP)	Analyze and generate natural language text for sentiment analysis, translation, and summarization.	    
Audio Processing	Customize models for accurate speech-to-text transcription and voice-based interactions.	     
Document Processing	Tailor solutions for automating workflows and extracting insights from business documents.	  

The image features a white background with decorative blue circles in the corners. A large light blue circle is in the top right, and a smaller medium blue circle is partially visible below it. In the bottom left, there is a medium blue circle and a larger light blue circle behind it.

BUILD AI SOLUTIONS

DigiVerse : Converting paper records to digital assets.

A premier digitization platform that converts paper records into digital assets. It utilizes advanced OCR and cloud-based access to streamline document management and drive data-driven innovation.

DigiVerse

Document Management System for Digital Archives.
Store, organize and index scanned documents in PDF, JPEG, and TIFF formats. Instantly find relevant information using full text, tags, metadata-based search, and multi-lingual OCR capabilities.

DataStudio: AI Platform for Model Training

DataStudio is our AI platform for efficient model training across domains like Generative AI, Computer Vision, and NLP.

Key Features:

- 1. Efficient Workflow**
Streamlined process for data preprocessing, training, and validation.
- 2. Advanced Tools**
Includes RLHF and Active AI Learning for performance enhancement.
- 3. Collaboration Features**
Facilitates seamless team collaboration on AI projects.

FlexiBench: Platform for Experts in the Loop

FlexiBench is our platform for on-demand ready-to-hire managed workforce for AI development, training, and applications, dedicated to enhancing AI accuracy and safety.

Key Features

- 50,000+ Experts Onboard
- Representation Across 20+ Academic Fields
- Fluent in 100+ Languages

Contributions

Data Labelling

RLHF

Translation & Localization

Code Generation

Model Quality Evaluation

APPLY AI SOLUTIONS

Nyaay AI :

Tailored for the judiciary sector, providing AI-powered solutions for digital transformation, including case management, document indexing, and virtual hearings.

PredCo :

An industrial AI platform specializing in predictive maintenance and operational efficiency through real-time data monitoring and digital twins.

RoadVision AI :

An advanced solution for road asset management, leveraging AI and Digital Twins technology to automate surveys, provide actionable insights, and ensure timely maintenance.

Analyze the image and identify the defects of this road.

Defects Identified in the Uploaded Image

The road in the image shows significant defects, primarily consisting of:

Large Cracks: There are multiple large cracks running across and along the road. These cracks are wide and deep, indicating severe structural damage.

Surface Deterioration: The surface of the road appears rough and uneven around the cracks,

Appendix

Our Past Work

Fine-Tuning LLM for legal research and drafting

Our project involved developing the Judicial AI stack for the Hon'ble Supreme Court of India and multiple High Courts. The focus was on:

- Legal document digitization
- Data extraction
- Defect Identification
- Text generation/ drafting and summarization

Challenges included

fine-tuning Large Language Models for legal domain knowledge and implementing advanced security protocols for handling sensitive documents.

	
 E-filing Automation	Automatically populates forms with data extracted from uploaded documents
 Extraction & Summarization	Extracts key points and creates summaries of complex legal documents for efficient case analysis
 Defects Analysis	Identifies potential errors or inconsistencies in uploaded legal documents during upload
 Audio Transcription	Converts uploaded audio recordings of court proceedings
 Similar Case Bunching	Identifies potentially relevant past cases during document upload to aid legal research
 Live Transcription	Provides live text transcription of courtroom proceedings as participants speak
 Conversational Bot	Provides users with answers to legal questions through a conversational interface
 Case Law Mapping	Connects cases based on precedent to guide legal decisions
 Legal Research	Enables users to research legal topics, find relevant case law, and explore legal concepts
 Legal Judgement Prediction	Analyzes legal documents and historical case data to predict potential court judgments

Real-Time Call Language Translation

Developed for a leading MNC in Customer Support Solutions, our project aimed to remove language barriers in emergency helplines during critical situations. The solution involved:

- Real-time transcription (speech-to-text) of live calls.
- Translation of transcripts to the operator's language.
- Generating synthetic responses (text to speech) in the caller's language.

Challenges included

Ensuring minimum latency and maintaining accuracy across 100+ languages.

Clinical Decision Support System (CDSS)

Our project focused on developing a comprehensive Clinical Decision Support System (CDSS) designed to enhance medical diagnosis and treatment.

The system takes a patient's medical history and questionnaire responses as input and generates possible diagnoses and treatment options, serving as a copilot for doctors.

Challenges included:

- Acquiring medical domain expertise across a wide range of medical conditions.
- Creating technical knowledge graphs to handle dependent questions.
- Implementing guardrails to ensure safe and reliable recommendations.

Model Training & Validation for Foundation Model

We collaborated with a Unicorn AI Startup in India to construct a foundational Gen AI stack for Indian languages. Our role encompassed:

- Creating training datasets.
- Validating the accuracy and safety of model responses.

Challenges included:

- Managing a large team of domain and language experts.
- Implementing guardrails for responsible AI practices.

AI-Based Road Asset Management System

Our project focused on developing and training an AI-based road asset management system for use by Smart Cities and Road Agencies. The system aimed to:

- Collect data on road conditions, safety measures, and other assets.
- Automatically process data and generate data-driven insights.
- Enable predictive maintenance of road assets.

Challenges included:

- Building a scalable solution to process large volumes of video data.
- Ensuring accuracy in asset condition detection and predictive analytics.

Other use-cases/ projects worked

In addition to our core projects, we've successfully delivered solutions for various clients across diverse domains, showcasing our versatility and expertise in applying AI solutions to address a wide range of client needs.

- Call Centre Automation
- Tumor & Disease Detection in Medical Reports
- Video & Document KYC Verification
- Sentiment Analysis of Financial News and Reports
- Personalized Recommendation Systems for E-commerce

- Resume Parsing
- Automatic Speech Recognition
- Synthetic Data Generation
- Object Detection & Segmentation
- Virtual Avatar Generation for E-commerce Cataloguing
- Text & Document Classification

Thank You.
